Graduate Medical Education

TRANSFORMING THE BUSINESS OF HEALTH

Improving your organization's GME programs and resources

DCA works successfully with large academic medical systems, sponsoring institutions, and individual training programs across the medical specialties spectrum.

DCA has extensive knowledge and expertise in training program regulatory/ accreditation requirements for all allopathic and podiatry programs. This expertise, combined with our understanding of the CMS financial support mechanisms, provides clients with creative and effective analysis and recommended solutions that are unique to the client organization and their strategic objectives.

DCA will address your organizations physician needs or shortages and align your GME portfolio to be consistent with your mission and strategies. DCA examines unabated growth in non-accredited fellowships and builds rationale for GME growth.

Using GME ProfilerSM, DCA provides comparative analytics, graphics, and narration of the program's current operating state and accreditation status. GME Organizations involving more than one institution lend themselves to alternative models, such as consortium, affiliated group, 501c3, or other structural and management formats.

Medical Education and related programs are considered an organizational strategic asset. DCA knows the evaluative questions that underlie assessments of performance and quality as they apply to System, Institution, and Program dimensions.

DCA's GME Services

- Enterprise-wide Academic Strategic Direction and Plan
- Comprehensive GME and UGME Program Profiles
- Developing and Writing ACGME Residency and Fellowship Program Applications for new Program Accreditation by ACGME
- Established Organizational and Operational Approach to Academic Medicine
- Fiduciary Responsibility for the GME and UGME Profit & Loss (P&L)

Note: Before expanding GME programs or developing new programs, DCA examines financial risks and opportunities. Before partnering with a medical school to offer residency programs to meet their expansion and enrollment needs, DCA evaluates the financial, cultural, and faculty impact on the hospital or health care network. DCA verifies IME and DME reimbursement, reviews Resident FTE Caps and Counts and takes other measures to optimize GME Funding.
